ApartmentOS

Design Direction Exploration

4 genuinely different UX paradigms for Jerusalem property management. Each direction matches a different mental model.

01 Command Center

02 Ledger

03 Property First

04 Shift Planner

WHAT WE'RE PRESENTING

01 Command Center

Urgency-ranked feed ·
universal search · swipe
triage

02 Ledger

Financial data
as dashboard ·
property P&L
cards

03 Property First

Photo grid home · self-
contained property
workspaces

04 Shift Planner

Live timeline · conflict
detection · dark mode
default

3 screens per direction · 13 frames total

Prepared for Sara & Ariel Marcus — Marcus Properties

"Your Trusted Property Manager In Jerusalem"

Your brand colors (copper accent) will be applied to the chosen direction during implementation.

Sound Familiar?

Every property manager in Jerusalem knows these moments.

WhatsApp threads with 4 contractors, 3 cleaners, and a plumber named Shmuel

An Excel sheet tracking commission on 20 properties

David Cohen calling at 9pm: 'What did I earn last month?'

A guest arriving tomorrow — but which apartment has the right entry code?

ApartmentOS replaces all of this.

COMMAND CENTER

Everything is one keystroke away.
Nothing is buried.

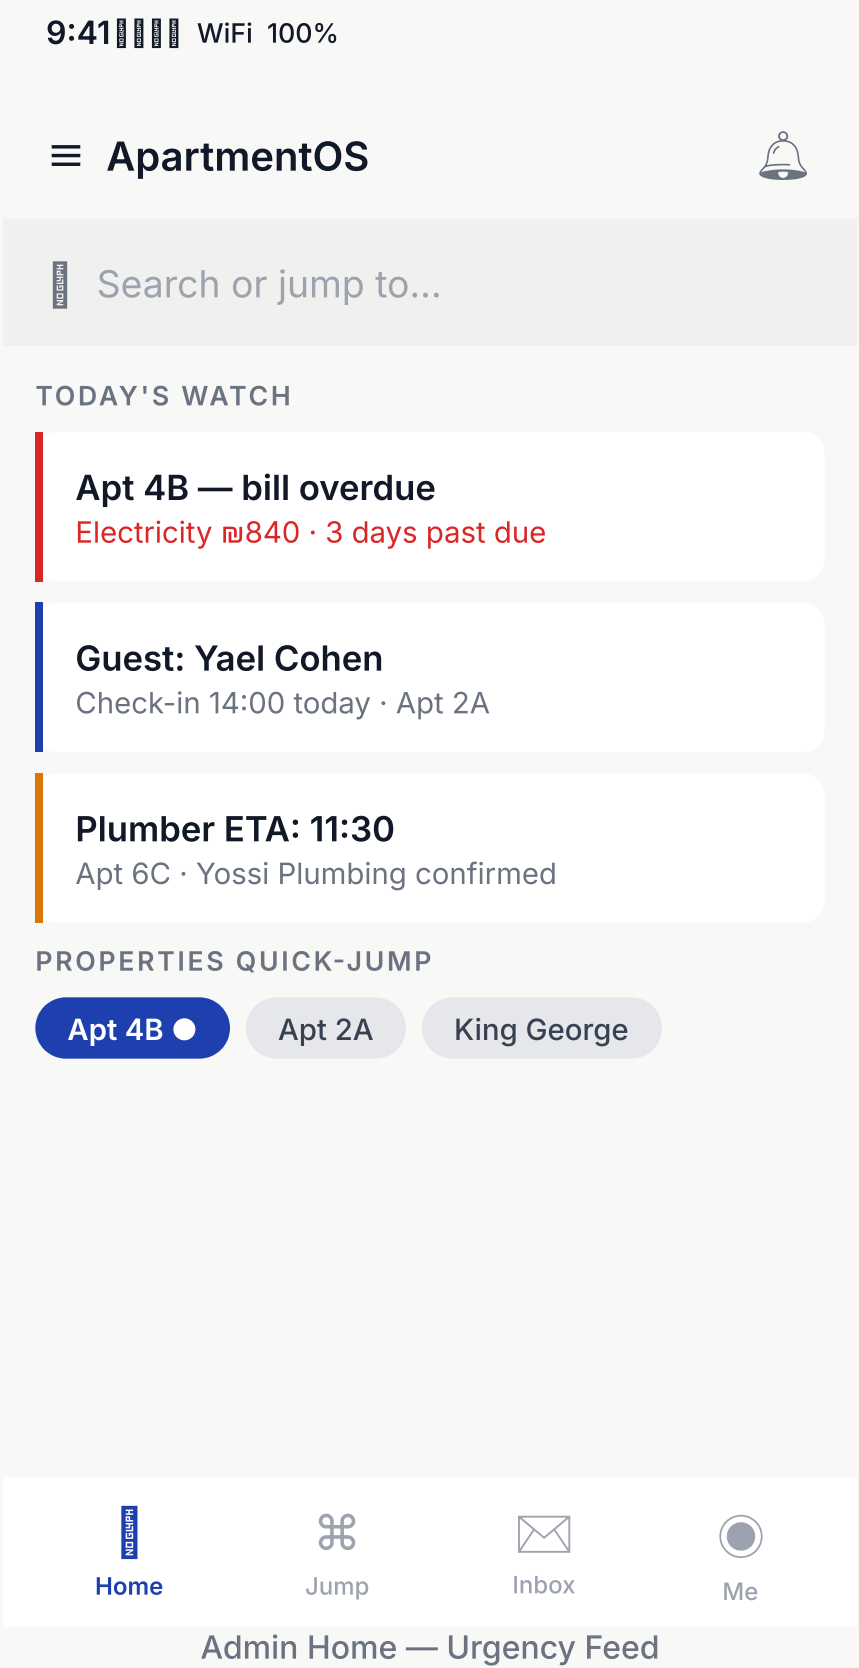

The admin managing 20 Jerusalem properties is between a contractor call and a guest check-in, thumb on glass.

Navigation is a failure mode. Command Center collapses the app's depth into one instant-access surface.

- Urgency-ranked feed as home screen
- Universal search bar always visible
- Swipe right = resolve / left = snooze
- 4-tab nav: Home, Jump, Inbox, Me
- Bottom sheets over new pages

Inspired by [Linear](#) · [Superhuman](#) · [Raycast](#)

COMMAND CENTER

Component Library

Interaction patterns that define this direction's feel. Each component enforces the speed-first philosophy.

Color usage:

Red border = blocking / urgent

Amber border = due soon

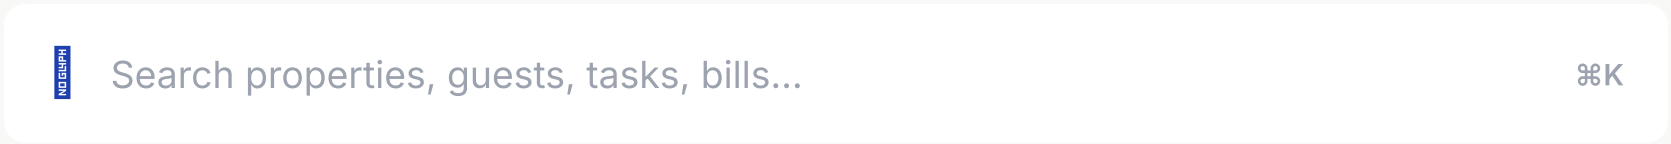

Blue border = informational

Green = resolved / clear

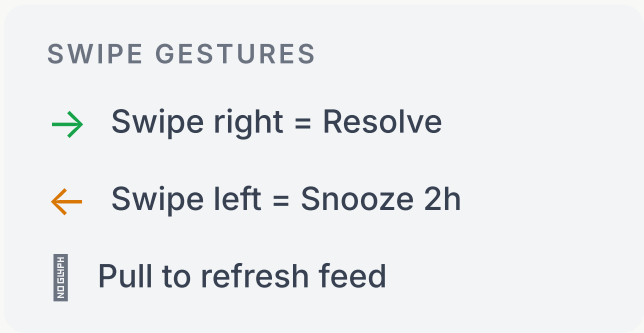

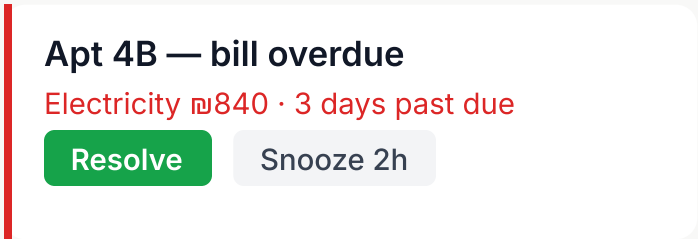

Typography: Inter UI · IBM Plex Mono for data

Density: 56px list items · 12px card padding

COMPONENT SHOWCASE

Command Bar — always visible, 48px tall

COMMAND CENTER

Contractor Magic Link

Zero friction. No login. No chrome. No navigation. Just the task — large enough to tap confidently while standing on a ladder.

Design principles for this view:

- No header navigation
- Checkboxes min 60px tall
- Camera inline with task item
- Green CTA bar fixed to bottom
- Signed JWT magic link · expires in 48h

Persona: Contractor (on-site, thumb-only use)

Task Assignment

Pre-Arrival Cleaning

Apt 4B — Ben Yehuda St · Today 10:00

✓ Kitchen surfaces cleaned

☐ Bathroom scrubbed & restocked

☐ Towels — 2 sets

☐ Photo required

Mark All Complete

Contractor magic link — no login, no nav chrome

7:30am. Coffee. Open ApartmentOS.

Everything urgent. Nothing hidden.

Sara opens ApartmentOS between site visits.
Three things demand attention. She resolves two
before finishing her coffee.

Sara — Property Manager

Front door keypad

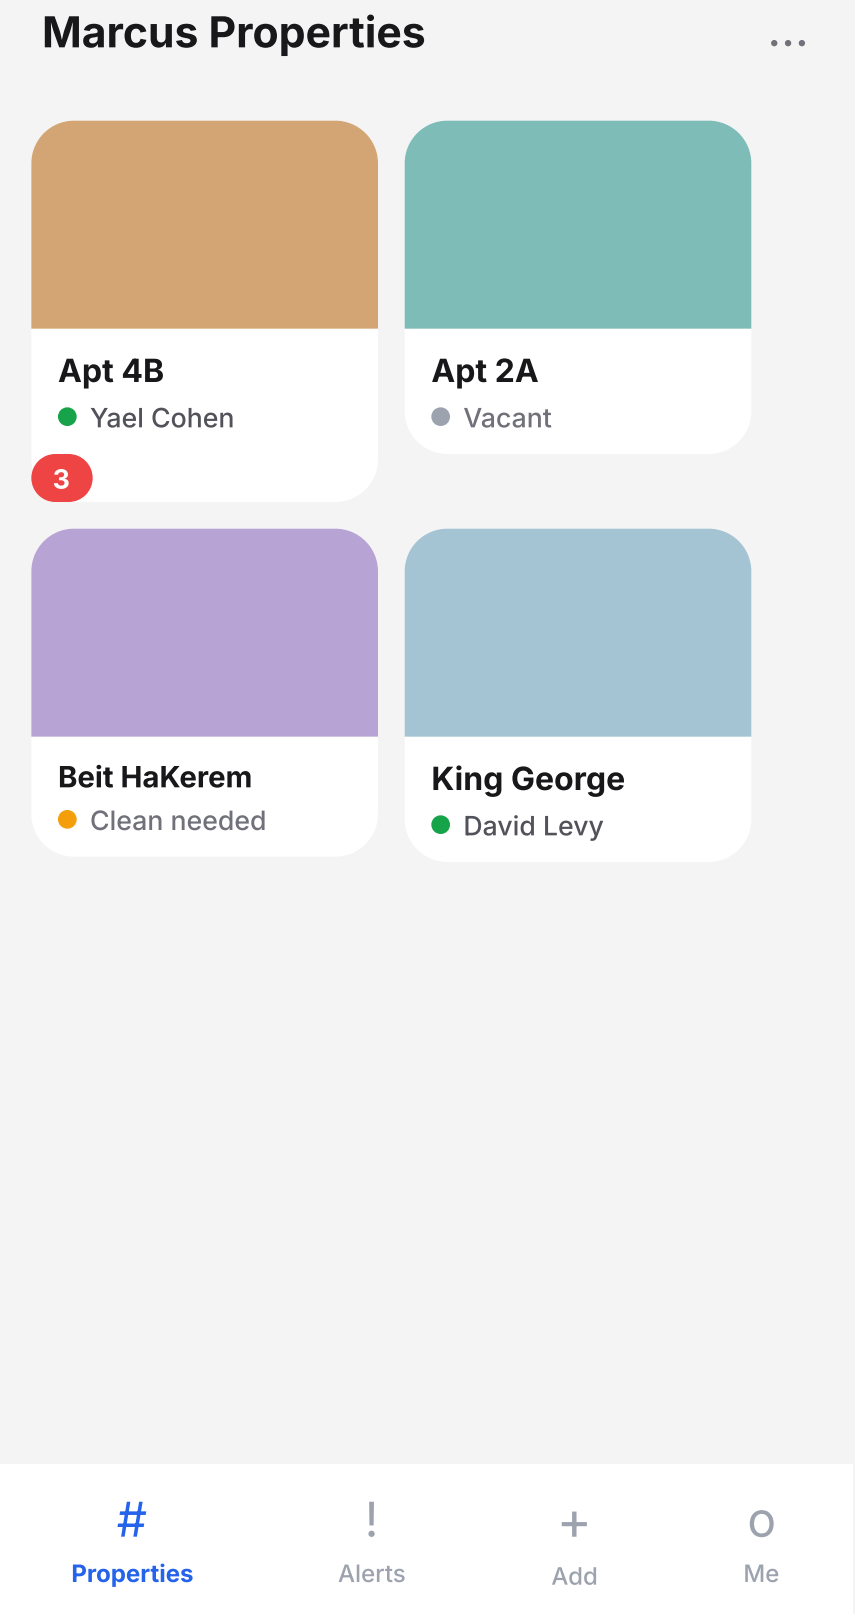

PROPERTY FIRST

Your properties are the interface.
Everything lives inside them.

- 2-column photo grid as home screen
- Photos = spatial recognition (20 props)
- Attention badge drives triage behavior
- 16px card radius — consumer-app feel
- No global Calendar / Tasks — all inside property

Inspired by Notion · Properly · iOS Photos

Property home — 2-col photo grid, attention badges, status dots

PROPERTY FIRST

Inside a Property

Tap any property card and you enter a self-contained workspace. No global sections — everything scoped to this single property.

4 module icons (each distinct color):

 Calendar — bookings for this property

 Finances — P&L for this property

 Tasks — open items for this property

 Docs — invoices, bills, files

Swipe left/right inside property = navigate to next/prev property

< Apt 4B — Ben Yehuda

● Guest: Yael Cohen

Inside property — hero photo, 4 modules, upcoming bookings & tasks

PROPERTY FIRST

Component Library

Property card design, module icon system, and attention badge — the three core visual elements of this direction.

Card radius: 16px — consumer-app feel

Photo aspect: 16:10 — property recognizable

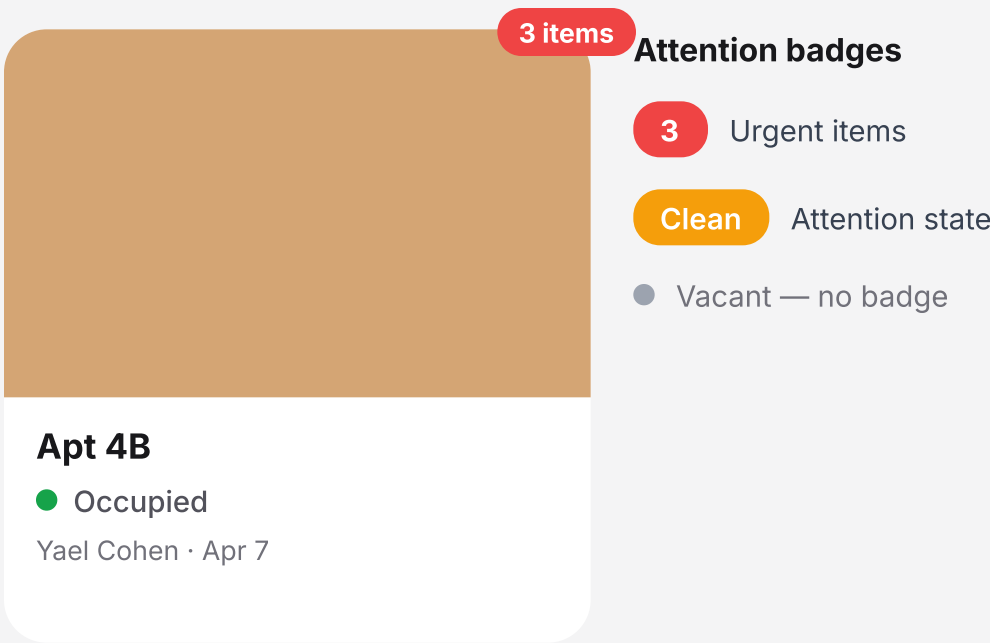

Status dot: 7px, fills = green/amber/grey

Badge: red #EF4444, iOS-standard placement

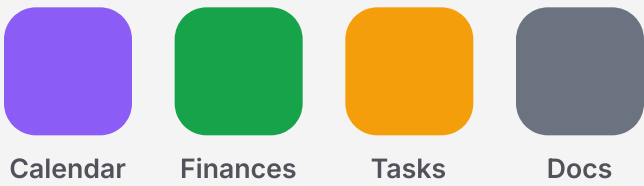

Module icons: each unique hue, 36×36, r10

Long-press card = quick actions: Add task, Add booking, Share link, Call owner

COMPONENT SHOWCASE

MODULE ICONS

Each module icon uses a distinct hue — Calendar purple, Finances green, Tasks amber, Docs grey. Color builds muscle memory across repeated use.

PROPERTY FIRST

20 properties. Sara knows each one by sight.

Your properties are the interface.

Open the app. See every property. Tap one. You're inside it — calendar, finances, tasks, documents, all in context. No mental translation. No global menus.

Shift Planner — dark mode default, live timeline, NOW marker

SHIFT PLANNER

Conflict Detection

The admin's real job is collision detection — two properties, one cleaner, one contractor slot. The timeline makes scheduling pressure visible at a glance.

Conflict states:

Red highlight =
overlapping
events

Warning label =
tight cleaning
window

Long-press
event = drag to
reschedule

Haptic fires on
conflict during
drag

Conflict detection fires in real-time as events are dragged. Red drop zones appear before the event is placed.

Fri, Apr 4 — Conflicts

2

10:00 **CLEANING**
Apt 4B · Window closes 12:30
Window too tight

12:00 **CHECK-IN**

Comparison Matrix Four design directions evaluated across eight operational dimensions				
Dimension	Command Center	Ledger	Property First	Shift Planner
Primary axis	Urgency	Financial entity	Physical property	Time
Home screen	Urgency feed	Portfolio P&L	Property grid	Today's timeline
Best admin moment	Quick action	Owner calls	Site visits	Morning ops brief
Owner experience	Borrowed	Native (ledger)	Native (property)	Limited
Information density	Medium-compact	Medium-dense	Medium-sparse	Medium-dense
Mobile paradigm	Search + swipe	Scroll ledger	Photo grid	Scroll-as-time
Dark mode	Optional	Optional	Optional	Default (recommended)
Main risk	Too sparse for reporting	Operations secondary	Cross-property visibility	Financials buried
Bold values in the Shift Planner column indicate the recommended choice per dimension. Dark mode is default for outdoor Jerusalem use.				

Our Recommendation

Based on the analysis of all four directions across the ApartmentOS operational context

ADMIN DAILY USE

Shift Planner

Time-based timeline as primary home. Collision detection across 20 properties is the core operational challenge.

Default dark mode Scroll-as-time

OWNER PORTAL

Ledger

Financial-first card layout. Owners log in for numbers — revenue, expenses, occupancy, payouts.

Portfolio P&L IBM Plex Mono

HYBRID ELEMENTS

Best of Both

Property First's photo grid as a secondary Properties tab. Command Center's universal search as an overlay on any screen.

Photo grid tab Universal search

Dark mode recommended for outdoor use in Jerusalem sun

Dark mode is our recommendation for outdoor use in Jerusalem — bright sun, glare on limestone and glass, and fast glance-use on-site all favour dark. Light mode will be available as an option.
